

## PUT YOUR SERVER IN A "FORTRESS"

### CONNECTWISE CLOUD SERVICES OPTION DELIVERS PHYSICAL SECURITY WITH REMOTE ACCESS TO YOUR DATA

Maybe your company headquarters is located in a region that's historically vulnerable to storms or floods. Or it could be that nearby businesses appear a little shaky in meeting the local fire codes. Perhaps crime and vandalism run high in your neighborhood. Whatever the reason, you would sleep better if the server that houses your business-critical records was in a different location.

#### Well Good News, ConnectWise Has Your Solution!

Our Cloud Services option is ideal for companies that want more physical security or more guaranteed uptime. Our service is also a great solution for companies that require more protection in order to comply with state or federal regulations that govern how electronic records are managed. But even as we move your server far from harm, you'll still enjoy full remote access that is as simple as connecting to the Internet!

#### Your Data Will Be at Home in Our Highly Secure Data Center

We can either host your equipment in our world-class data center, or you can opt for a fully hosted solution where you don't even need to purchase or move physical servers. But either way, you can rest assured that we maintain constant temperature and humidity controls, constant physical security, and constant power. Our data center has diesel generator backup power so that you are provided with more constant uptime than what you could provide at your own location.

After you are set up in our data center, you'll be able to access your data from anywhere that has an Internet connection. Your employees will have access to the server just as if it were right down the hall. Work from the office, home, a client's office, out of town, or wherever. All of your data is virtually right at your fingertips — always. And we can set you up with secure encryption technology so your information won't be compromised.

#### No More Server Purchases

If you don't like having to replace servers every few years, then the fully hosted Cloud solution is for you. There is no hardware to purchase or maintain. ConnectWise takes care of the backups, and you have less to worry about.

Our success at ConnectWise is based on understanding the concerns of business owners and managers like you and providing the perfect IT solutions to address those issues.

## KEEP YOUR DATA SAFE WITH CONNECTWISE CLOUD HOSTING SERVICES

Experience the worry-free convenience of remote access to your files and data with ConnectWise's secure Cloud Hosting Services.

## WE'LL MANAGE YOUR NETWORK SO YOU CAN MANAGE YOUR BUSINESS

Cloud Hosting at our secure datacenter is just one the many ways we work to meet your needs. Cloud Hosting solutions can include:

- **Cloud Server Hosting** – Move your data and applications to the cloud without having to purchase a server.
- **Server Colocation** – Move your physical server into our secure Data Center.
- **Hosted Email** – Enjoy secure, reliable email without having to invest in an Exchange server.
- **Hosted SharePoint** – Create a site where you can share information and facilitate team collaboration.
- **Office 365** – Use the power of Microsoft's Office Suite and always have the latest version available to you.
- **E-mail Archiving** – Keep records of important emails that will be searchable when you need them.
- **E-mail Encryption** – Encrypt emails on-demand or automatically to protect sensitive documents.
- **Web Hosting** – ConnectWise can design and host your website to enhance your virtual presence.

Additionally, you can count on ConnectWise for onsite assistance with:

- **Anti-Spam Protection** – Stop spam and other e-mail-borne attacks before they reach your network.
- **Anti-Virus Security** – Protect desktops and servers from approximately 300 viruses launched monthly.
- **Installation and Upgrades** – Let us improve your WAN, LAN, VPN, Internet or wireless environments.
- **Office Moves** – Get systems working quickly and efficiently in the new place without missing a beat.
- **IT Department Support** – Let us monitor and maintain systems to address concerns before
